

QUICK START GUIDE

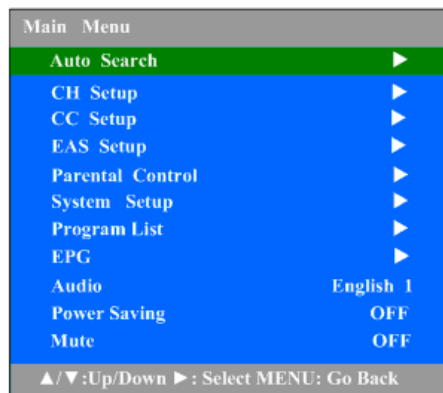

Important: Please read before you operate your Tivax Scout 3⁵ TV

Basic Instructions (for detailed instructions please refer to our 31 page User Manual)

- Install the Li-Ion battery (refer to User Manual)
- Connect your TV to a power source either battery or power supply
- Connect your TV firmly to either an antenna for free over-the-air signals or to a TV cable outlet.
- Turn switch on the side of the unit to “ON” position. The Tivax Scout 3⁵ does not have a standby feature. The ON/OFF switch is used in order to conserve battery life.
- Scan the TV for channels available in your area before initial use or after you have changed the location of the TV.

Scanning:

- Press down the “Menu” button on your Scout 3⁵ TV set. The Main – Main Menu will appear on the TV screen.

- The item highlighted on the top of the Main Menu is “Auto Search”.
- Press the right arrow (Vol+) on your TV set.
- The Auto Search window now appears on TV set. The highlighted item is now “Source Type”.
- Use the right arrow (Vol+) button to select either Antenna or Cable depending on the connection source for your signal.

- Once Antenna or Cable is selected, press the down arrow (CH-) on the TV set to highlight the next selection: “Start Search”.
- Press the right arrow (Vol+) to start the search for channels available in your area.

- Wait for TV to conclude search for digital stations.

Additional Notes

- Please be aware that the number of channels received depends on your proximity to the broadcast tower. You may require a more powerful antenna to secure more channels. An adapter (included) will be required to connect to this antenna.
- Although your TV is highly portable, digital reception may be poor when moving, as when in a vehicle. For best digital reception the TV must be stationary. This characteristic is true for any digital TV.
- The Tivax Scout 3⁵ has no provisions to accept any batteries other than the provided Li-Ion battery.
- The Tivax Docking Station (optional) does accommodate AA batteries. This option will soon be available to Scout 3⁵ users.
- Your TV will also work with a 12V power supply through the included car battery adapter. Such a connection will also re-charge the internal LI-Ion battery.
- The included AC adapter both powers the TV and charges the battery. There is no need to remove the battery when using the AC adapter.
